

Sunshine

Like sunshine, the heat from a gas heater of the radiant type will flood your room with cheeriness and warmth.

The radiant gas heater is a radical departure from the usual type of heater and it brings to you Nature's oldest and most efficient form of heat—radiant heat—the wholesome heat by which the sun warms the earth. Radiant heat will pass through air, glass, ice or any other transparent obstacle undisturbed by air currents.

An instant after lighting this gas heater it will be glowing with a beautiful effect.

The radiant gas heater affords highly efficient combustion without smoke or odor, and it is always under perfect control.
